The absence is noted of a generally agreed to method
for the reduction of observations made for determining
the coordinates of the center of the moon's mass. Re-
sults of observations at six points are compared. These
should be considered as direct results, which are inde-
pendent of any preconceived hypothesis. Four models,
used in the reductions of heliometric observations, are

ANALYTICAL METHOD (Goskizhenskaya) Method
by A. P. Prigod. 4 Dec. 62, 9p. 5 refs. N.S.I. 1962,
no. 922
Order form: STS 40.50

Trans. of the Academy of Sciences of the USSR
Inform. comp. by letter (USSR) 1960, no. 2, p. 1744

DESCRIPTION: Methods. Brightness. Astronomical
Photography. Photometers

Instrument for determining the brightness of meteors
by a photographic method are described. The structure
of new equipment used in the astronomical observatory
of Kiev State University is discussed. The principal
part of this apparatus is a freely swinging collimator
with an assembly of artificial meteors. With the aid of
light microscope the trace of one of the artificial meteors
is integrated. 50 films per record - 1 is 35-100 mm.
